JUNIOR FULL STACK DEVELOPER

BI Developer | Database Developer |

Summary

As a software developer, I specialize in designing, developing, and maintaining software applications using Angular and the .NET frameworks, including ASP.NET Core. My technical prowess spans programming languages such as TypeScript, C#, and Java, as well as experience with database management systems, software development tools, architecture, and design patterns. Working in collaboration with team members, I create scalable and dependable software applications tailored to the needs of businesses across various industries. My passion for continuous learning and staying current with the latest technology trends enables me to deliver cutting-edge, innovative solutions.

JUNIOR FULL STACK DEVELOPER

BI Developer | Database Developer |

.Net/Angular Developer

- I am currently working on a web portal designed to assist sport federation users in managing university events, memberships, and travel planning. My primary focus lies within the mission module, which aims to enhance the user experience by enabling users to effortlessly create and manage mission participants.
- In essence, our mission module is crafted to simplify the mission planning process and foster collaboration among team members.
- Technologies: .NET Core, Angular, SQL Server

.Net/Angular Developer

- Developing a healthcare-focused social network for professionals, aiming to simplify medical document sharing between doctors and patients while enhancing the overall healthcare experience.
 - Offering convenient appointment booking for patients via mobile devices, either in-person or online, with their preferred doctors.
 - Providing doctors with a range of tools to manage appointments and streamline work processes, saving valuable time and resources.
 - Featuring a secure document repository for healthcare professionals to store and share medical records and other essential information, enabling quick and easy access for efficient medical care.
 - Including a user-friendly interface for secretaries and administrative staff to manage appointments and easily handle emergency rescheduling.
 - Ultimately, striving to create a powerful, versatile healthcare tool that caters to the needs of doctors, patients, and their teams, improving the quality of care and overall patient experience.
- Technologies: .NET Core, Angular, SQL Server, Flutter, SignalR

Spring Boot/Angular jsDeveloper

Developing a web application for the internship service at FSEGS, designed to streamline the internship process for students and staff with features such as:

- A repository and archive for end-of-study projects, allowing for easy access and management.
- Random assignment of supervisors, ensuring a fair distribution of workload and mentorship.
- Scheduling of defenses, facilitating the organization of presentations and evaluations. Our goal is to create an efficient, user-friendly platform that simplifies the internship process for all parties involved. Technologies: Spring Boot, AngularJs, MySQL
